PORTFOLIO / 2026

Artistic vision. Practical systems.

I build creative AI tools that keep artists in control of the next decision.

20+ YEARS OF PRODUCTION CRAFT

Animation + VFX / Real-time / Creative AI

THE FOUNDATION

The craft comes first.

20+ years across animation, VFX, real-time look development, and artist tools shape how I design creative systems.

DREAMWORKS ANIMATION / 2010 - 2021

Department Chair, Look Development Supervisor, and Environment Surfacing Lead.

REAL-TIME + CREATIVE INNOVATION

Spire Animation (2021 - 2023) and FableLight Studios (2023 - 2024).

PRODUCTION JUDGMENT

Composition, materials, lighting, review, and collaboration at feature-film scale.

LUMIFY / PRODUCT OWNERSHIP

A workspace built around creative intent.

Co-Founder & Chief Creative Technology Officer, Lumify AI / 2024 - Present.

PRODUCT + INTERACTION

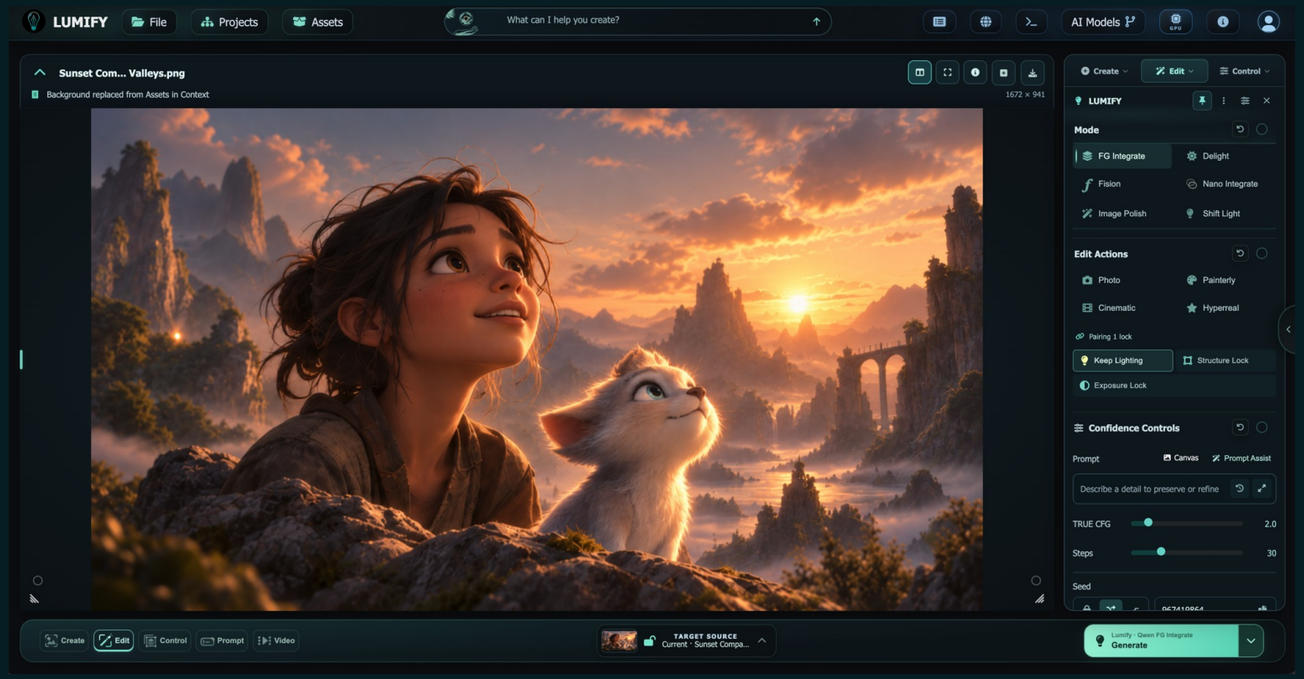

Lead creative direction, product strategy, and artist-facing interaction design.

HANDS-ON IMPLEMENTATION

Connect responsive interfaces to Python/Flask services, provider routing, asynchronous jobs, and saved work.

ONE CREATIVE CONTEXT

Bring the canvas, reference library, shots, and the Cut into a connected workflow.

LUMIFY V2 / PRODUCT INTERFACE

REFERENCES / CREATIVE CONTEXT

Start with the work.

Give the system the visual context that the artist has already chosen.

REFERENCE LIBRARY

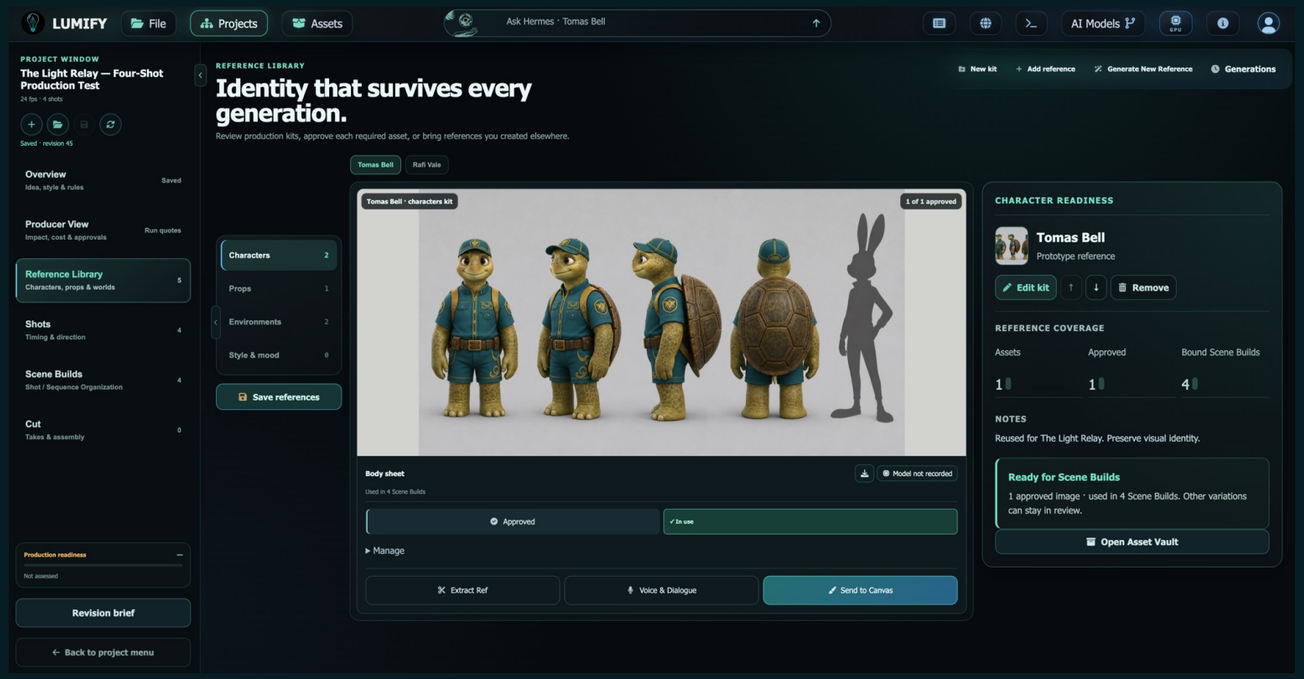

Organize source material and assign reference roles within the project.

APPROVAL + LOCK

Review imported references and preserve approved Library context.

SAVED DIRECTION

Carry shot and camera choices into generation and review.

LUMIFY V2 / PRODUCT INTERFACE

GENERATION / REVIEW BEFORE ACTION

Make the next step explicit.

A clear creative action needs a clear decision about what will run.

BATCH STILLS

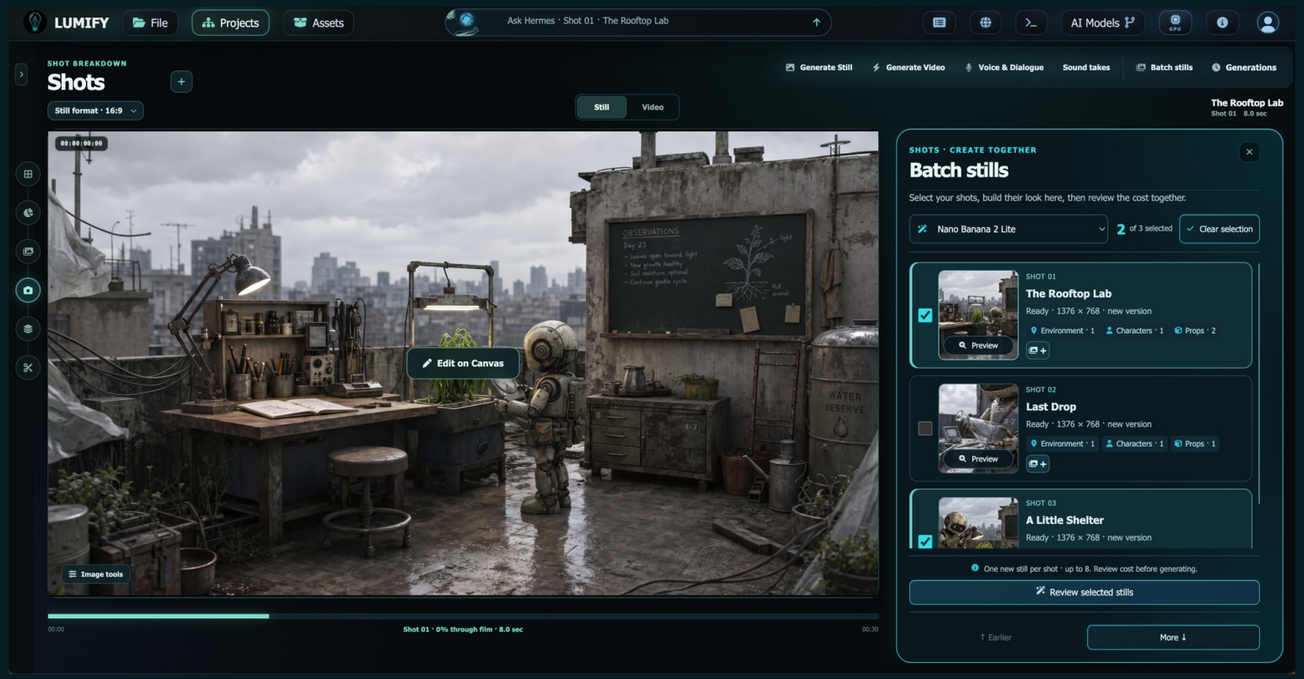

Select shots, shape their look, and review the proposed generation.

QUOTE + APPROVAL

Show estimates and require explicit approval before chargeable generation.

CAPABILITY-AWARE CHOICES

Match available controls to model, provider, task, and deployment policy.

LUMIFY V2 / PRODUCT INTERFACE

SHOTS / ITERATION

Keep the alternatives.

Generation is part of the process. Choosing the right take is an artistic decision.

RETAINED TAKES

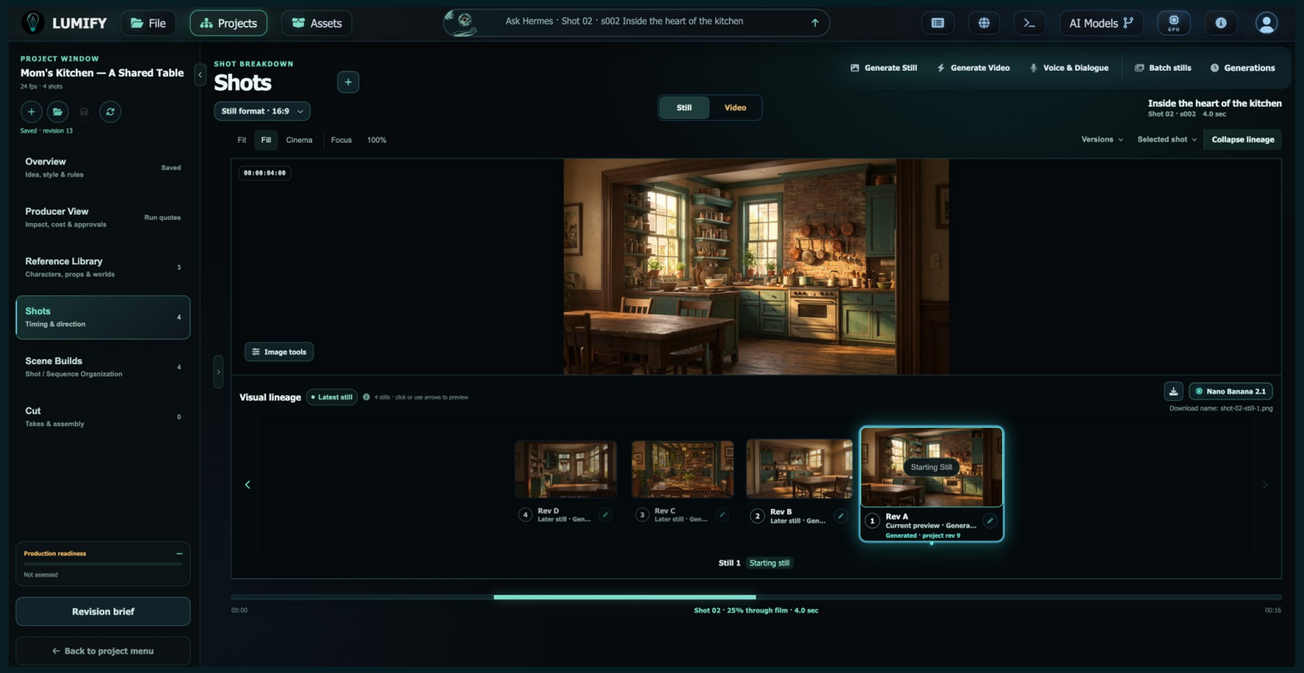

Preserve earlier results so artists can return to and compare their options.

SHOT VIDEO

Generate from approved inputs and supported model contracts.

PREVIEW IS NOT SELECTION

Let artists inspect a take before explicitly choosing Use in Cut.

LUMIFY V2 / PRODUCT INTERFACE

THE CUT / EDITORIAL CONTINUITY

Carry decisions into the edit.

The selected take becomes part of a saved sequence, with a visible path to review.

EXPLICIT SELECTION

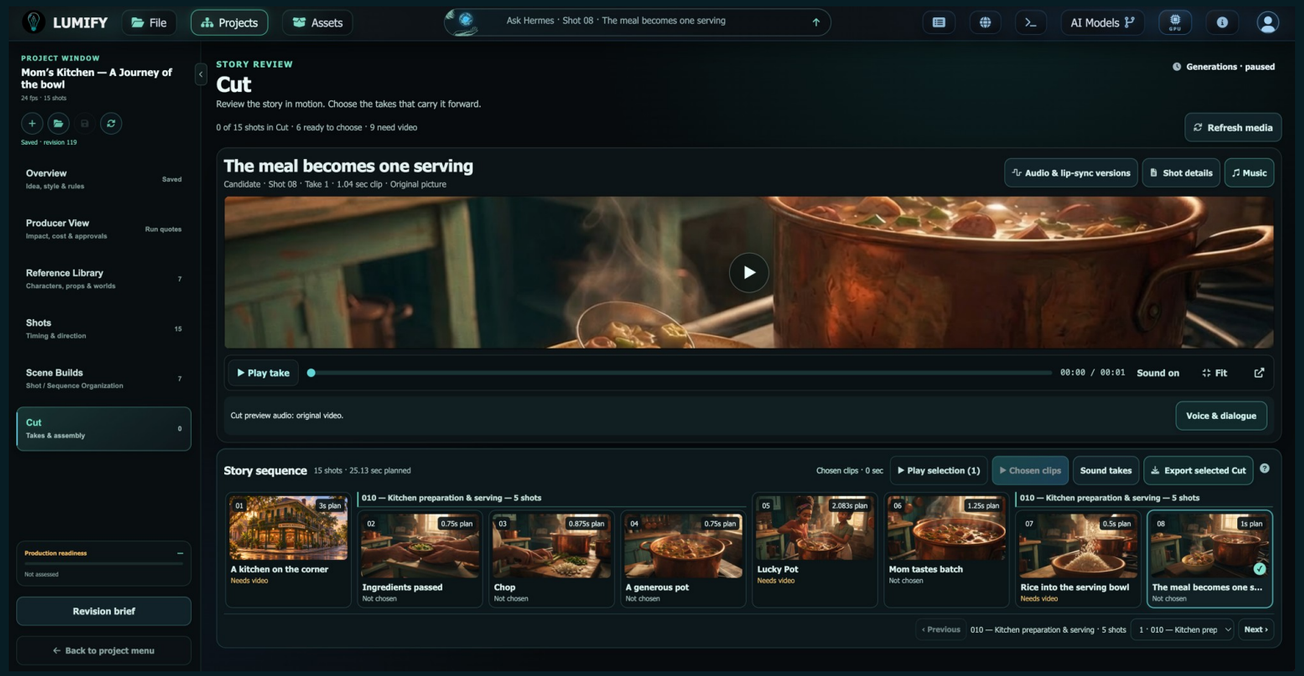

Assemble the takes the artist has chosen for the Cut.

TIMING + REVIEW

Arrange shot timing and assemble a review MP4 from saved video selections.

AUDIO WORKFLOWS

Support speech, music, and sound as part of the project workflow.

LUMIFY V2 / PRODUCT INTERFACE

ARCHITECTURE / END-TO-END OWNERSHIP

Connect the experience to the system.

I work across the layers that turn a visual goal into a reviewable result.

01 / INTERACTION

Artist-facing state

JavaScript, HTML/CSS, visual controls, validation, and feedback.

02 / ORCHESTRATION

Policy, route, execute

Python/Flask, REST APIs, server-controlled routing, job status, and recovery.

03 / CONTINUITY

Save, trace, review

SQLite, source lineage, revisions, provider provenance, and FFmpeg review export.

INTEGRATION / EVOLVING CAPABILITIES

Models evolve.
Intent stays visible.

Integrate new capabilities through a consistent creative workflow.

PROVIDER CONNECTIONS

Runway, fal.ai, World Labs, and local model services.

IMPLEMENTATION PRACTICE

Model/provider adapters, AI Toolkit, hosted and local inference; working knowledge of PyTorch/CUDA, Diffusers, and Transformers.

VALID CONTROLS

Deployment policies and model contracts shape which actions and settings are available.

VISUAL + SPATIAL PRACTICE

Think beyond a single frame.

Production craft and spatial thinking inform the tools I build for image, motion, and generated worlds.

ARTIST-DIRECTED IMAGE WORK

Relighting, material, time-of-day, and camera controls make creative intent actionable.

REAL-TIME FOUNDATION

Unreal Engine and Substance experience connects materials, world building, and interactive feedback.

SPATIAL WORKFLOWS

3D and world-generation integrations extend the creative vocabulary alongside image and video.

DESIGN OUTCOMES

Make the process legible.

The product value is in the decisions artists can understand and control.

BEFORE GENERATION

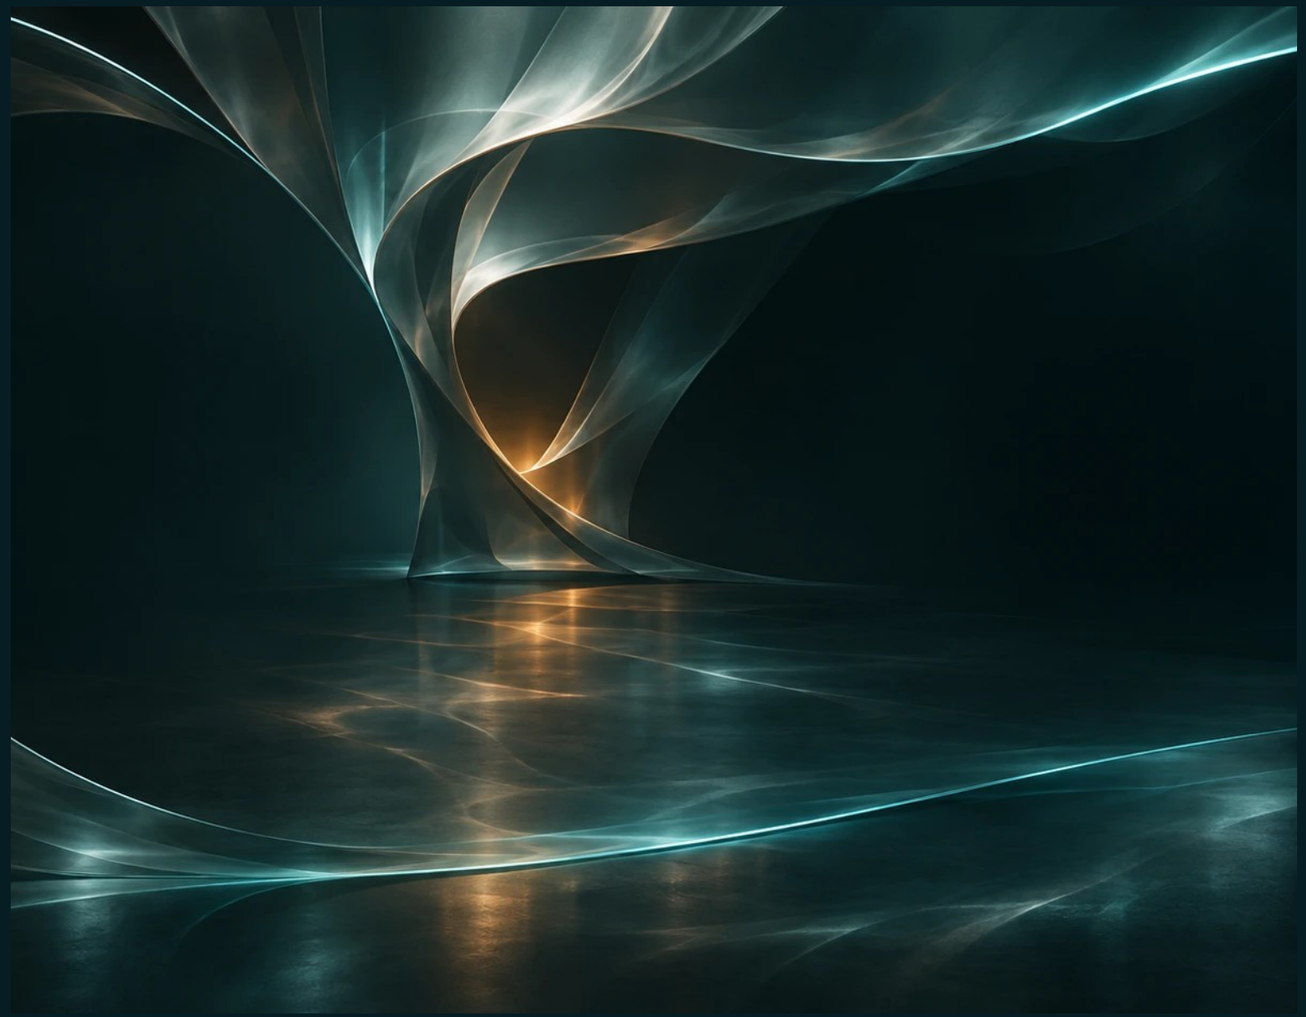

Review references, supported settings, and estimated costs.

DURING ITERATION

See job status, retain takes, and trace source context.

AFTER REVIEW

Choose what enters the Cut, protect saved revisions, and assemble work for review.

LET’S CONNECT

Creative judgment. Product thinking. Hands-on delivery.

Building artist-facing AI products, creative research, and visual workflow systems.
